Company Overview

Wasabia has the strongest sterilizing power among natural substances but is not common due to its difficulty with cultivation.

We grind wasabia on our own, which is used as food or food additives. We actually produce snacks containing wasabia, wasabia tea, and wasabia drinks. And we plan to mass-produce safe anti-bacterial airtight containers using the natural extract of wasabi.

All wasabia products are state-of-the-art well-being products that use scents to block harmful bacteria or fungi floating in the air to maintain a comfortable environment all the time.
