Company Overview

The company was established by researchers with expertise in biochemistry, molecular biology, immunology, microbiology and fermentation technology and specialized in evaluating biologically active substances of cosmetics and food ingredients and their efficacy and conducting research on their mechanism at the level of genes. It also endeavors to raise the efficacy of materials and the content of the biologically active substances through the application of fermentation technology and develop formula technology for optimized effects so that the results of research can be reflected in products.

We have a firm conviction that a nature-friendly scientific method is the best way to keep skin healthy and improve its conditions. SHEBAH BIOTECH INC will do its utmost to grow into an environmentally-friendly cosmetics manufacturer engaged in protecting the nature and the environment.
